

Portable MeetingSphere® Server

The MeetingSphere Portable Server is the ideal solution for anything from high-powered workshops to large-scale events where you cannot rely on the Internet.

The server comes pre-installed with the MeetingSphere software and is capable of serving hundreds of simultaneous users. The Portable Server is designed for ease-of-use, with automatic configuration of the network and a simple on/off switch. Just plug into a wireless access point and you're ready to go.

MeetingSphere - Anywhere

The MeetingSphere Portable Server brings the complete functionality of MeetingSphere to locations which do not have a stable Internet connection.

	Agenda Templates. Design and save ready-made session agendas. For personal productivity or to apply "Best practice" of your organization.
	Brainstorm. Get ideas flowing fast and sort ideas into themes. Full anonymity or optional tagging by team make for openness and flow.
	Discussion. Engage participants to exchange arguments or points of view on multiple topics simultaneously.
	Rating. Prioritize items on one or multiple criteria. Analyze results via tables or charts to identify consensus and inform decision making.
	Presentation. Share any PDF instantly as a slide show. Invite participant to provide feedback on the optional discussion channel.
	ActionTracker. Plan and track actions. Who does what by when? Clear priorities and time lines. Versioned decision and progress report logs.
	Report. Instant minutes, fully-formatted and branded. Full documentation or management summary. Specify with just a couple of clicks.

Designed for Ease of Use

The Portable Server is optimized for use by non-technical people. Simply plug into a power source, switch it on and plug the wireless access point into the Ethernet port. Log in with your browser (HTTP) and run your meeting or event. The built-in DHCP server provides IP addresses for up to 239 participant computers. Add routers if 239 computers is not enough. It's that easy.

Portable MeetingSphere Hardware

The MeetingSphere Portable Server comes with the software pre-installed in a box that literally fits in your hand. It's ready to run, without keyboard or monitor, just like a router or modem and with plenty of punch. All configuration and maintenance occurs through the browser. The robust server operating system (CentOS Linux) ensures stability.

Subscription Model

Once you have purchased the server hardware you will need to purchase a subscription to the Portable MeetingSphere software. You may purchase one or multiple host subscriptions. Each host subscription comes with a defined number of concurrent users: 25, 50, 100, 200 or over 200. Note that unlike standard MeetingSphere host subscriptions, concurrent-user host subscriptions on Portable Servers are not tied to a named user, so anyone in your team can just grab the server and run an interactive and engaging event – anywhere!

CPU	Intel Core i5-2450M, 2.5 GHz
RAM / Chipset	8GB DDR3 PC1333 / Intel QM67
Solid State Drive	SSD 64GB SATA 3
Ethernet	Intel 82579LM 1GB
Backup drive	USB drive (USB 3, not included)
Power adapter	AC 90W, 20V, 100-240V
Dimensions / Weight	167.5(B) x 54(H) x 167.5mm(D) 1.6 kg
